McHenry County Department of Health 2016-17 Influenza Surveillance October 2nd, 2016 – May 20th, 2017 (Weeks 40 – 20)

The McHenry County Department of Health annually conducts influenza surveillance through two different systems. The first system is based on weekly reporting of sentinel healthcare sites of rapid test-positive influenza cases (Figure 1a) and number of clients seen with influenza-like illness (ILI) (Figure 1b), which is defined as a fever $\geq 100^{\circ F}$ and cough and/or sore throat in the absence of a known cause other than influenza (note: all cases of ILI were reported by sentinel sites, not just ER cases). The second system is a daily reporting of school absenteeism and absenteeism due to ILI (figure 2).

McHenry County Department of Health 2016-17 Influenza Surveillance October 2nd, 2016 – May 20th, 2017 (Weeks 40 – 20)

The state of Illinois reports flu activity on a weekly basis from sentinel hospitals throughout the state. For more information on Influenza in the state of Illinois please see http://www.dph.illinois.gov/topics-services/diseases-and-conditions/influenza/surveillance

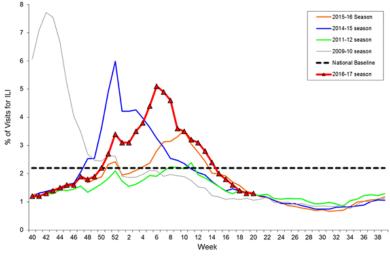

FluView: Weekly U.S. Influenza Surveillance Report: Summary (Week 20 ending 05/20/2017) (http://www.cdc.gov/flu/weekly/)

- During week 20, influenza activity decreased in the United States.
- The percent of specimens testing positive was 4.3%. Of the specimens testing positive for influenza, 26.8% were influenza A and 73.2% were influenza B.
- During week 20 the proportion of outpatient visits for ILI was 1.3% which is below the national baseline of 2.2%.
- The proportion of deaths attributed to pneumonia and influenza was 6.1% for week 18 which was below the national epidemic threshold of 6.9% for week 18.
- Three additional pediatric deaths was reported during week 20. Ninety-five pediatric deaths have been reported during the 2016-2017 influenza season. Additional data can be found
